# Chapter 1

## Introduction

There are many, many ways to make a website these days. This workshop series aims to help you make a personal website using the `distill` packages

- This is just ONE way that is used by a lots of folks in statistics and that leverages your existing R and R Markdown skills

This workshop series is designed to help you build a

## Chapter 2

# Literature

Here is a review of existing methods.

## Chapter 3

# Methods

We describe our methods in this chapter.

## Chapter 4

# Applications

Some *significant* applications are demonstrated in this chapter.

### 4.1 Example one

### 4.2 Example two

## Chapter 5

# Final Words

We have finished a nice book.

## Appendix A

# Buy a domain name (optional)

You can label chapter and section titles using `{#label}` after them, e.g., we can reference Chapter `??`. If you do not manually label them, there will be automatic labels anyway, e.g., Chapter 3.

Figures and tables with captions will be placed in `figure` and `table` environments, respectively.

```
par(mar = c(4, 4, .1, .1))
plot(pressure, type = 'b', pch = 19)
```

Reference a figure by its code chunk label with the `fig:` prefix, e.g., see Figure A.1. Similarly, you can reference tables generated from `knitr::kable()`, e.g., see Table A.1.

```
knitr::kable(
  head(iris, 20), caption = 'Here is a nice table!',
  booktabs = TRUE
)
```

You can write citations, too. For example, we are using the **bookdown** package (Xie, 2021) in this sample book, which was built on top of R Markdown and **knitr** (Xie, 2015).
